

动态化weex的搭建体系

阿里巴巴 - 国际UED - 体验技术部 辟蹊原创会 杭州站 2018.07

01 无线店铺的业务特性分析

- 02 无线店铺的技术演变
- 03 无线店铺weex的架构和优化

01 无线店铺的业务特性分析

店铺要解决的问题

特性一:商家运营阵地,对页面要求可装修

特性二:设计师参与,开放市场

技术保障:规范化开发者的技术并能持续多年,能支持到历史数据迁移和升级;

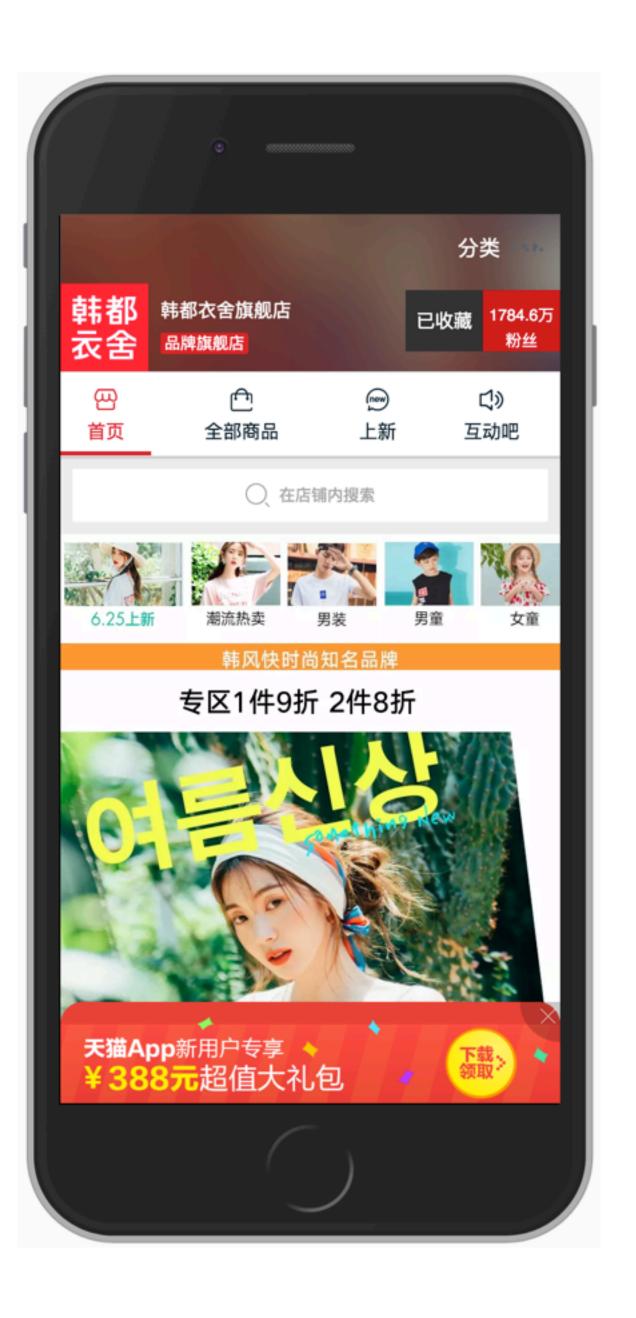

标准建立: 提供新的开发能力和统一的接入标准;

安全质量: 为市场的模板和模块提供安全和质量保障;

特性三: 个性化域名

https://shop58501945.taobao.com

https://handuyishe.m.tmall.com

因业务特性带来的问题

- 支持装修,那就需要搭建体系,动态的内容如何保障性能
- 2 开放市场,端上安全怎么保障? 开发体验如何保持一致?
- 3 动态域名,必然有DNS查询,端内如何缓存如何做?

02 无线店铺的技术演变

阶段一: H5时代

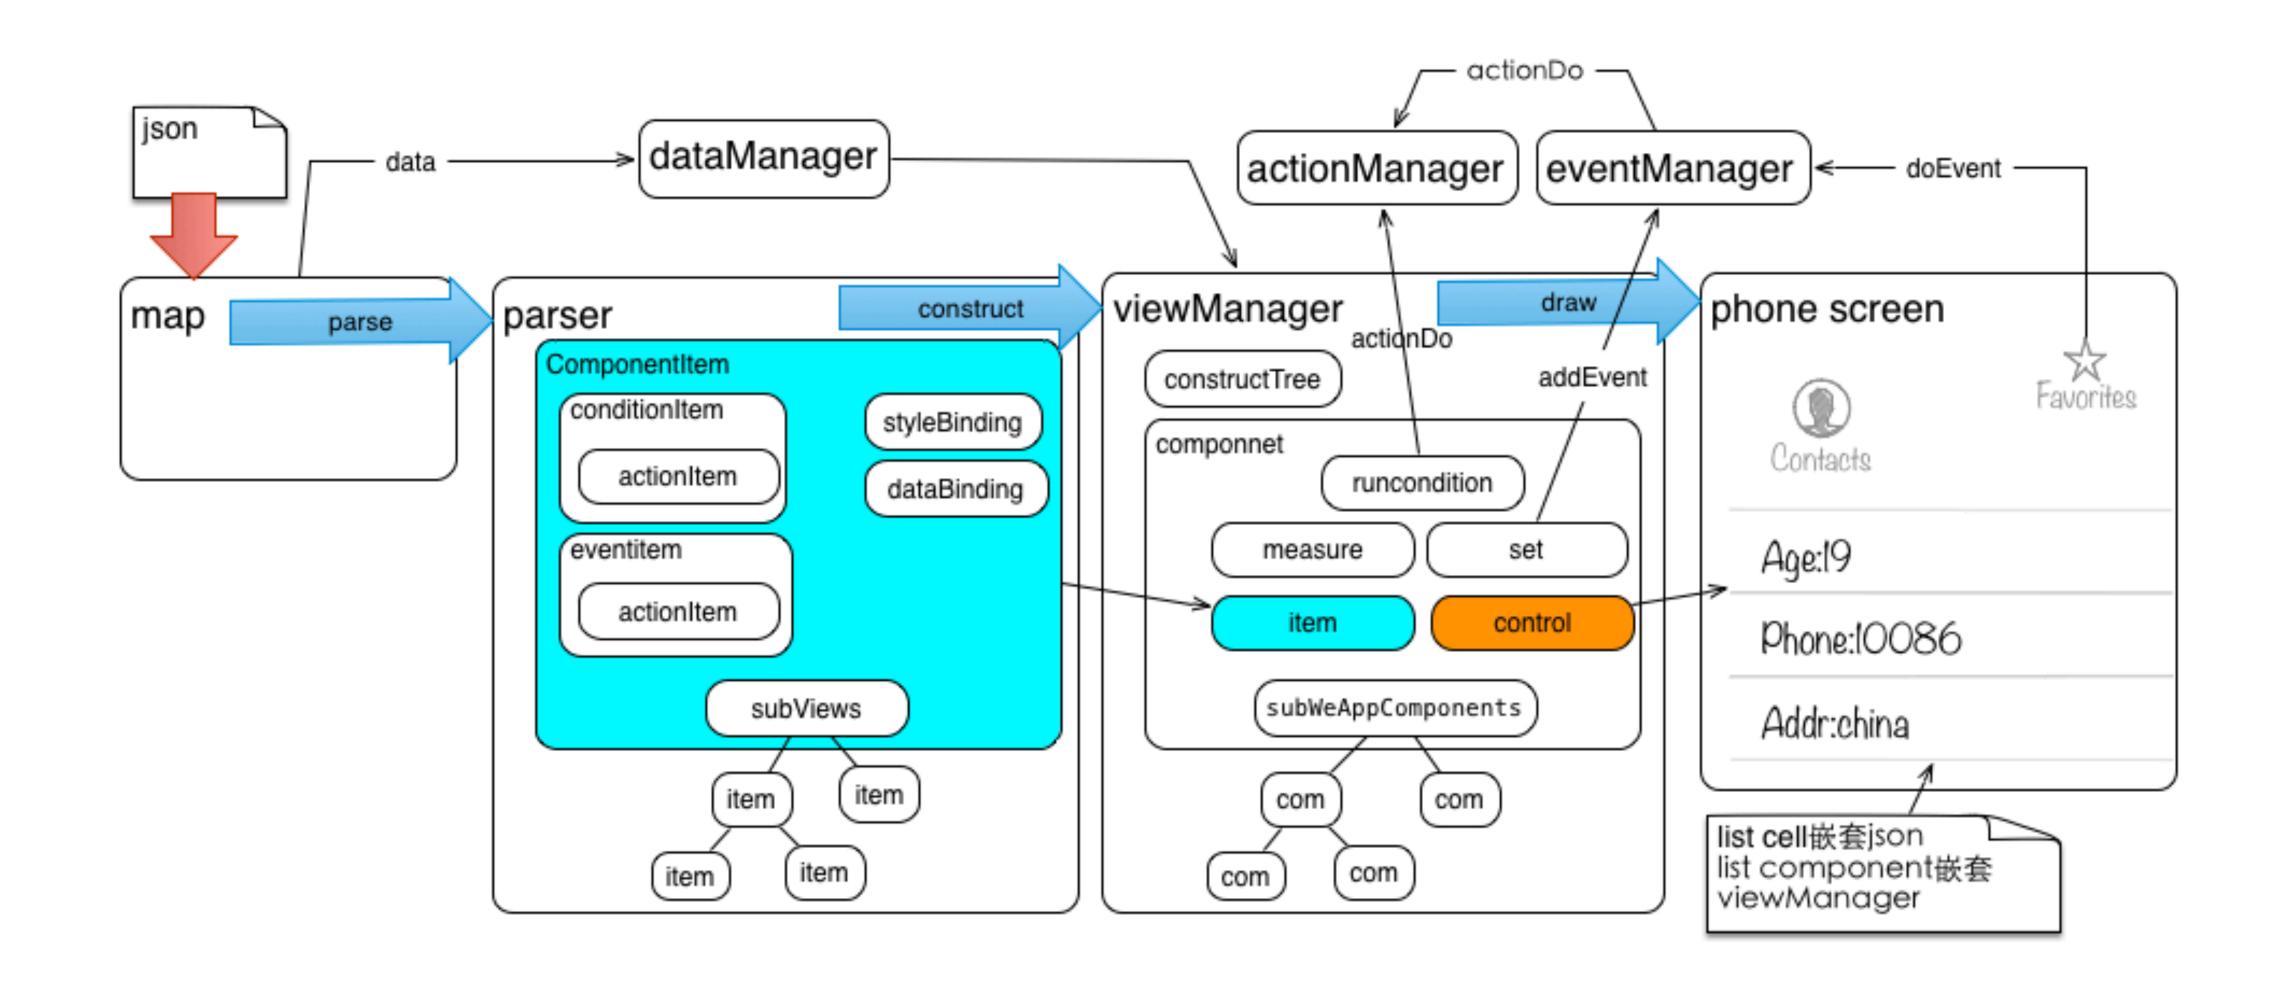

Native容器

Webview容器

阶段二: weapp时代

XML,跨平台,动态部署

阶段二: weapp时代

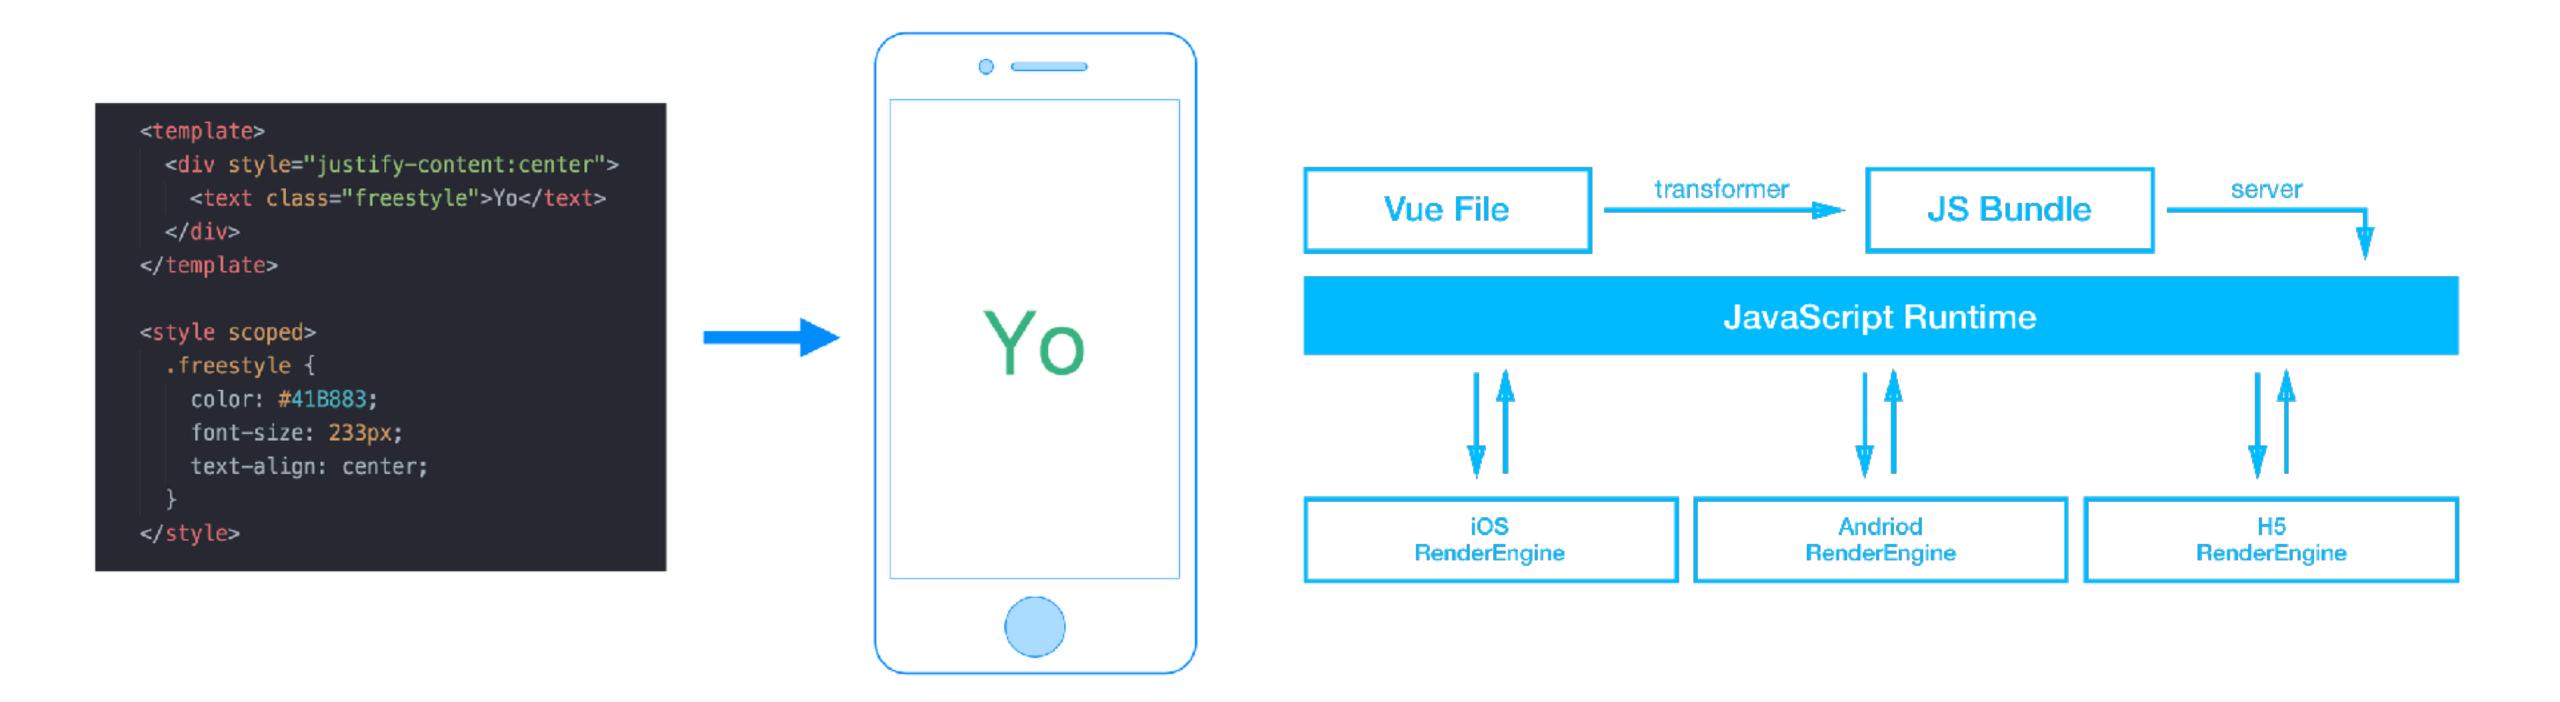

Native容器

weapp容器

阶段三: weex时代

跨平台,动态部署,回归前端本质,引入JSRuntime,很多组件前端即可实现

阶段三: weex时代

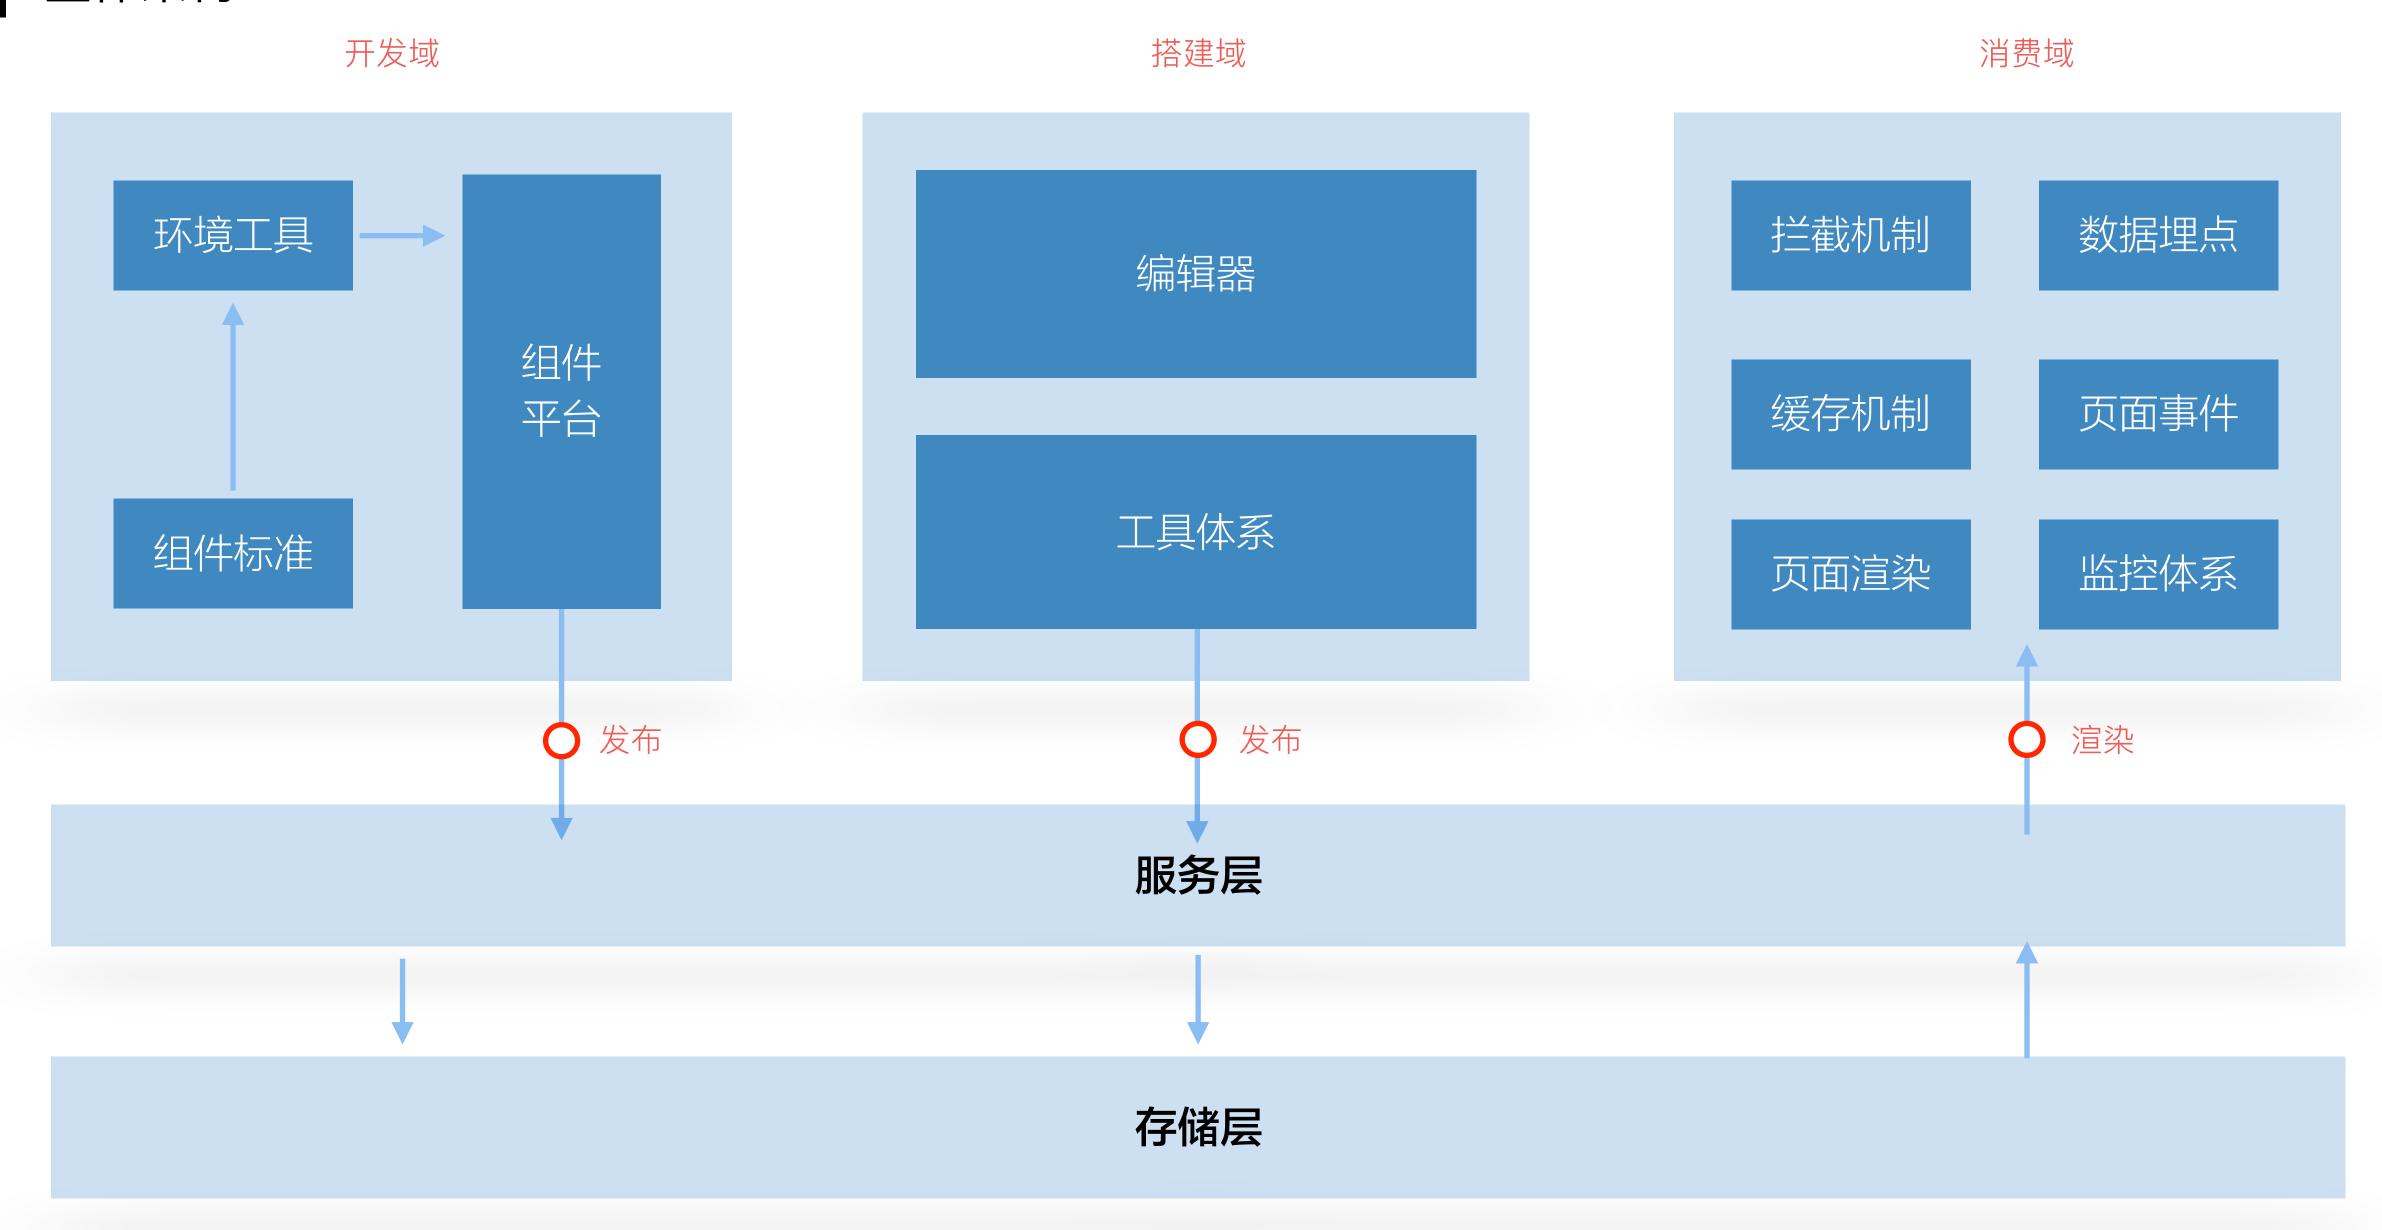

Weex容器

Weex页面

03 无线店铺weex的架构和优化

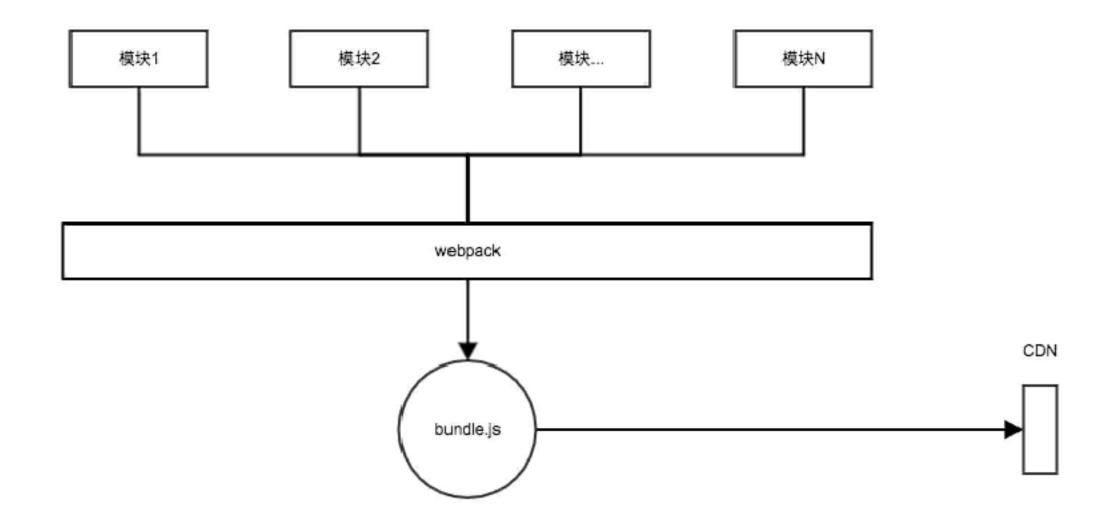

模块定义和实现

```
globalData: {
                                                               "moduleName": "title",
   "@realtimeData@": "@realtimeData@",
                                                               "moduleNameAlias": "official-wl-title",
   "pageName": "Rax测试",
                                                               "assetsPackageName": "officialmod",
   "pageId": 75527005,
                                                               "componetId": "36218",
   "shopId": 112772958,
                                                               "widgetId": "99999",
    "pageType": "3760",
                                                               "isEmpty": "false",
    "userId": 2202220535,
                                                               "defaultImage": "//gw.alicdn.com/tps/i2/TB1VGOiFVX.png",
   "userNick": "it官方旗舰店",
                                                               "defaultImageHeight": 359,
   "loginUserId": "0",
                                                               "moduleData": {
   "spm_cnt": "a2141.7631565",
                                                                  "hideBottom": true,
                                                                  "title": "这是一个测试标题",
   "uuidRqt": "f256eb6b-38ab-412e-acb2-b1670e2b7d03",
                                                                  "href": "//h5.m.taobao.com"
   "extParam": "{}",
   "atp_isdpp": "4v112772958",
                                                               "moduleStatic": {}
   "at_isb": "0",
   "at_alis": "1_2202220535",
   'preView': false,
    'spaceInBetween': 8
   <Module gdc={gdc} mds={mds} pageUtils={pageUtils} />
        define("officialmod/official-wl-title/index.web",[...],function(require,e,t){
          ...
        });
                               这是一个测试标题
```

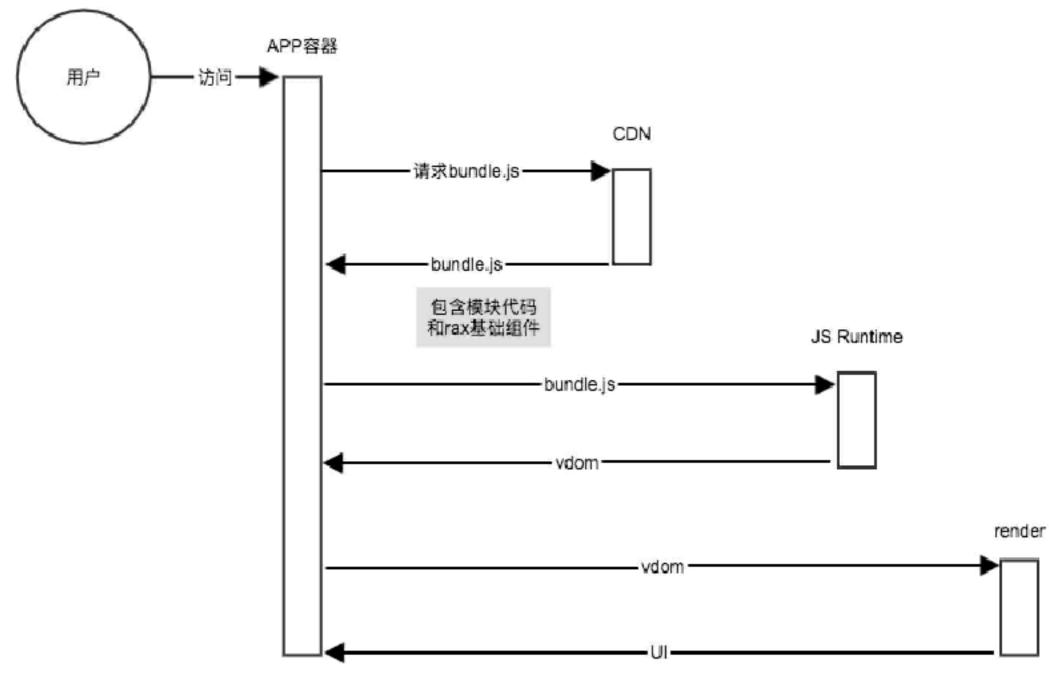

不考虑动态化加载的实现

bundle.js 构建

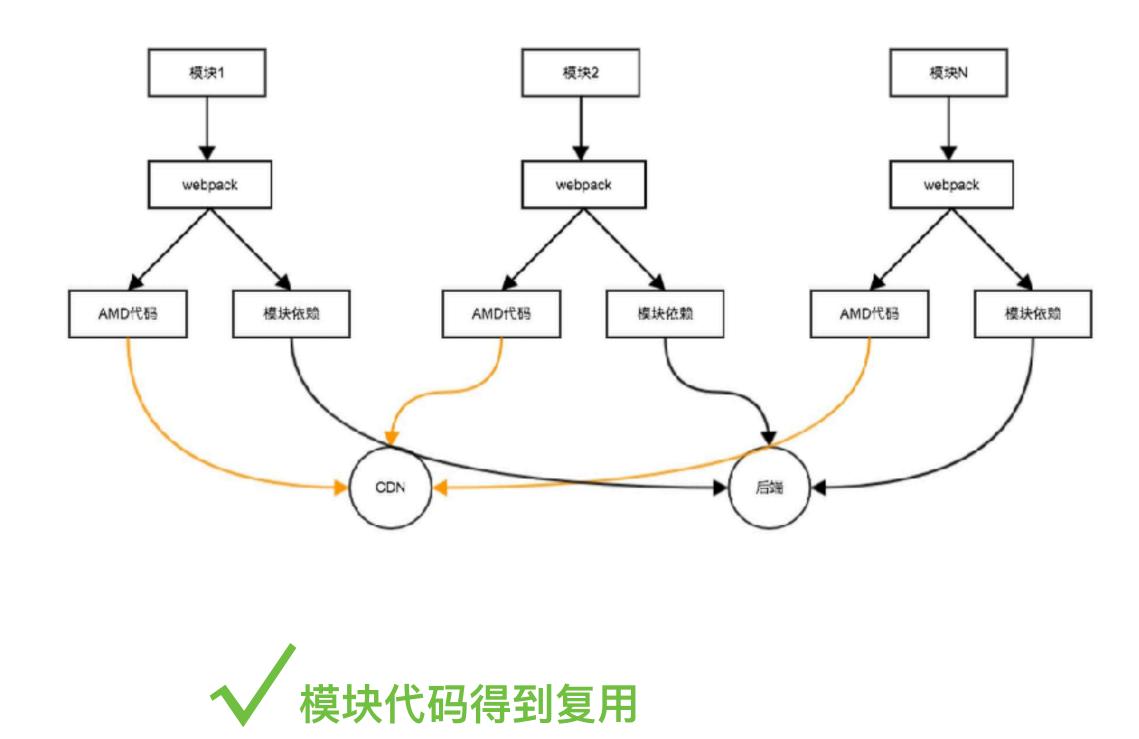

用户访问链路

- **X** 模块代码无法复用
- **X** 随着页面的模块增多,体积不可控

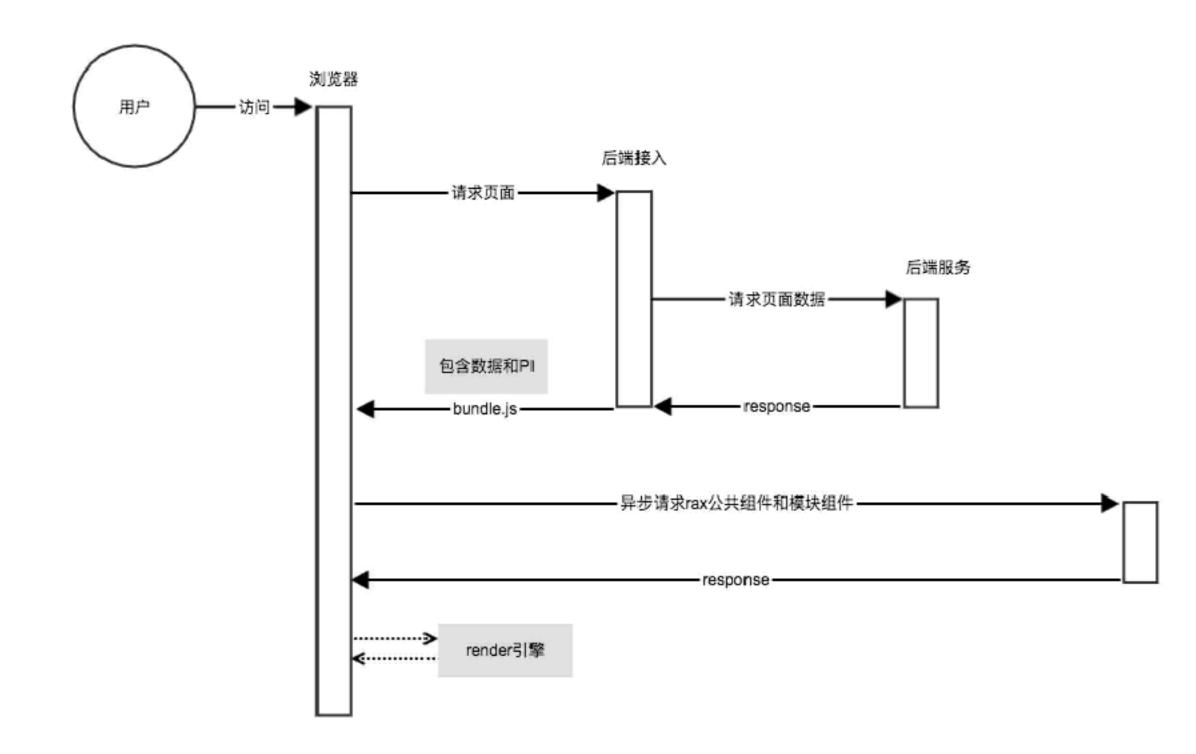

动态化加载的实现

模块的构建

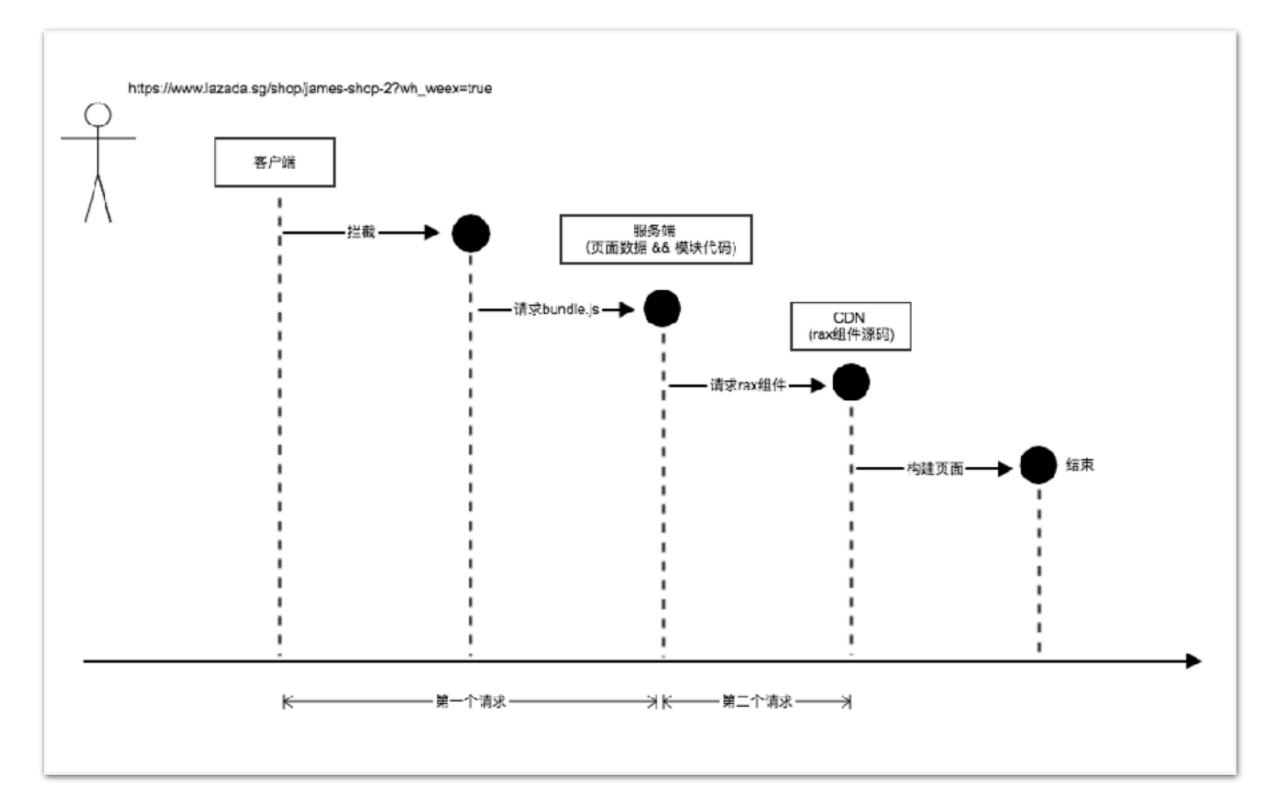

用户访问链路

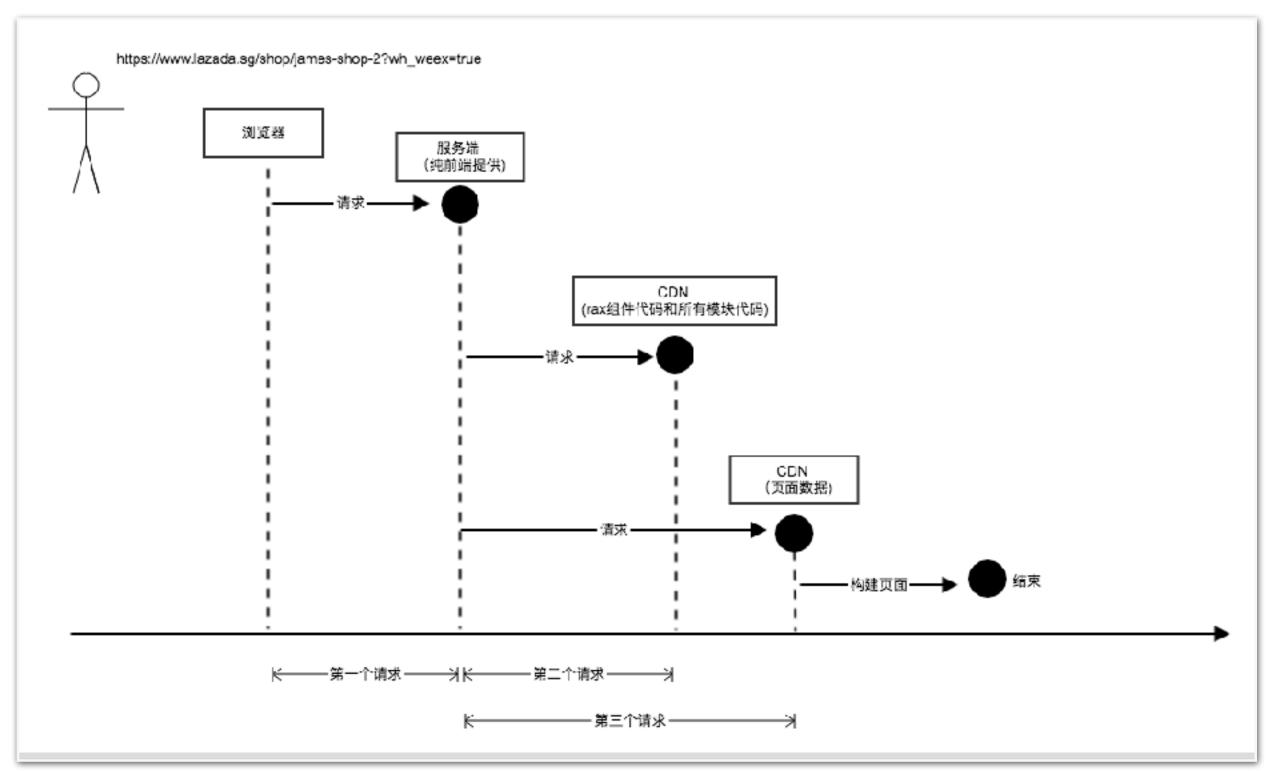

数据动静分离

原访问链路

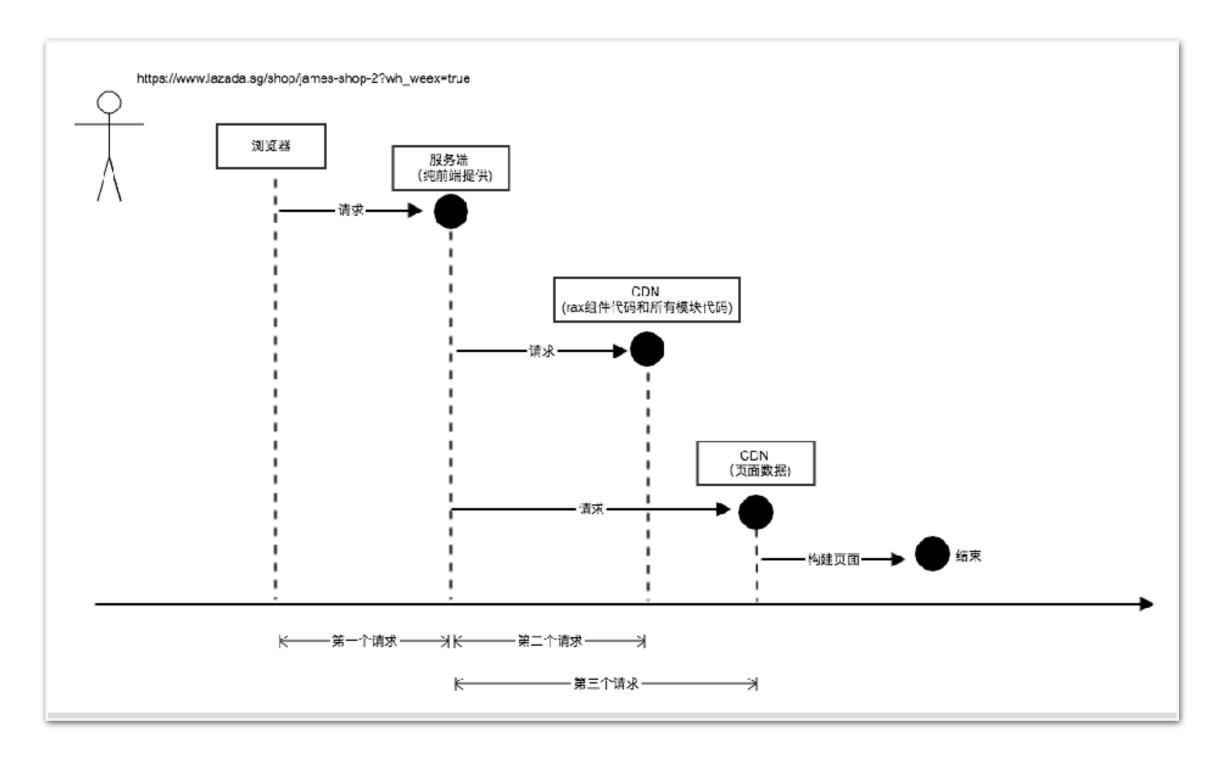

新访问链路

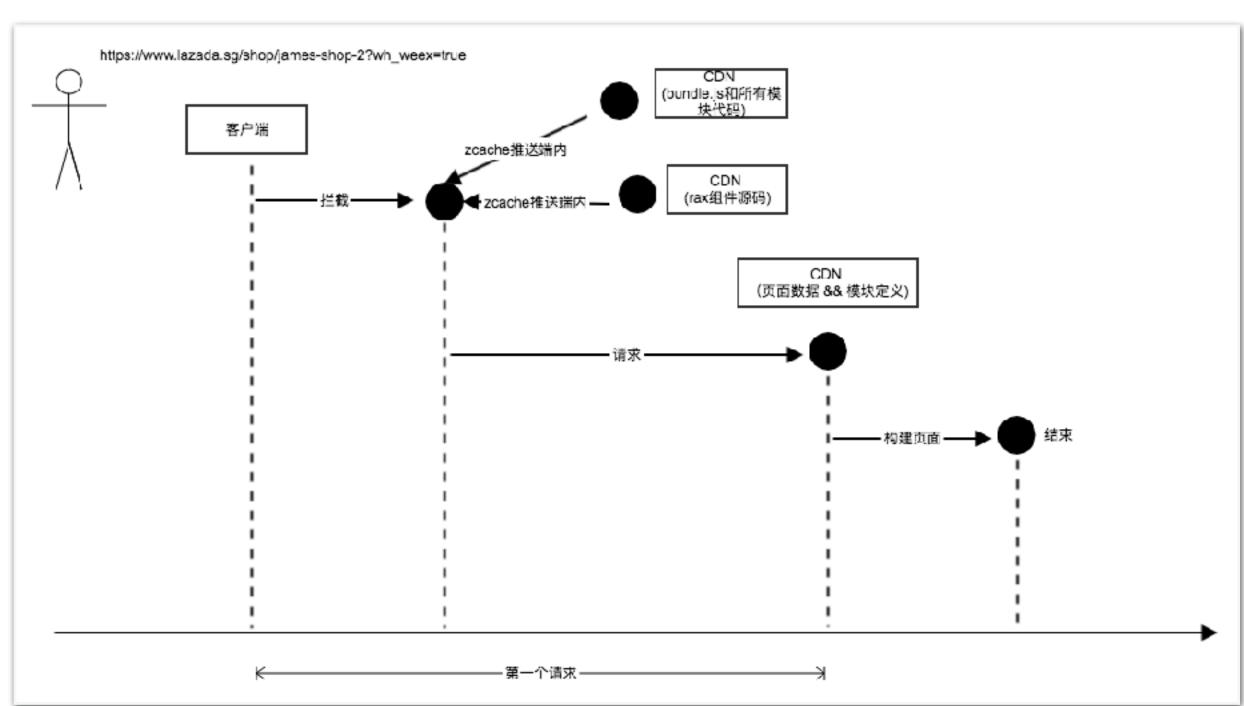

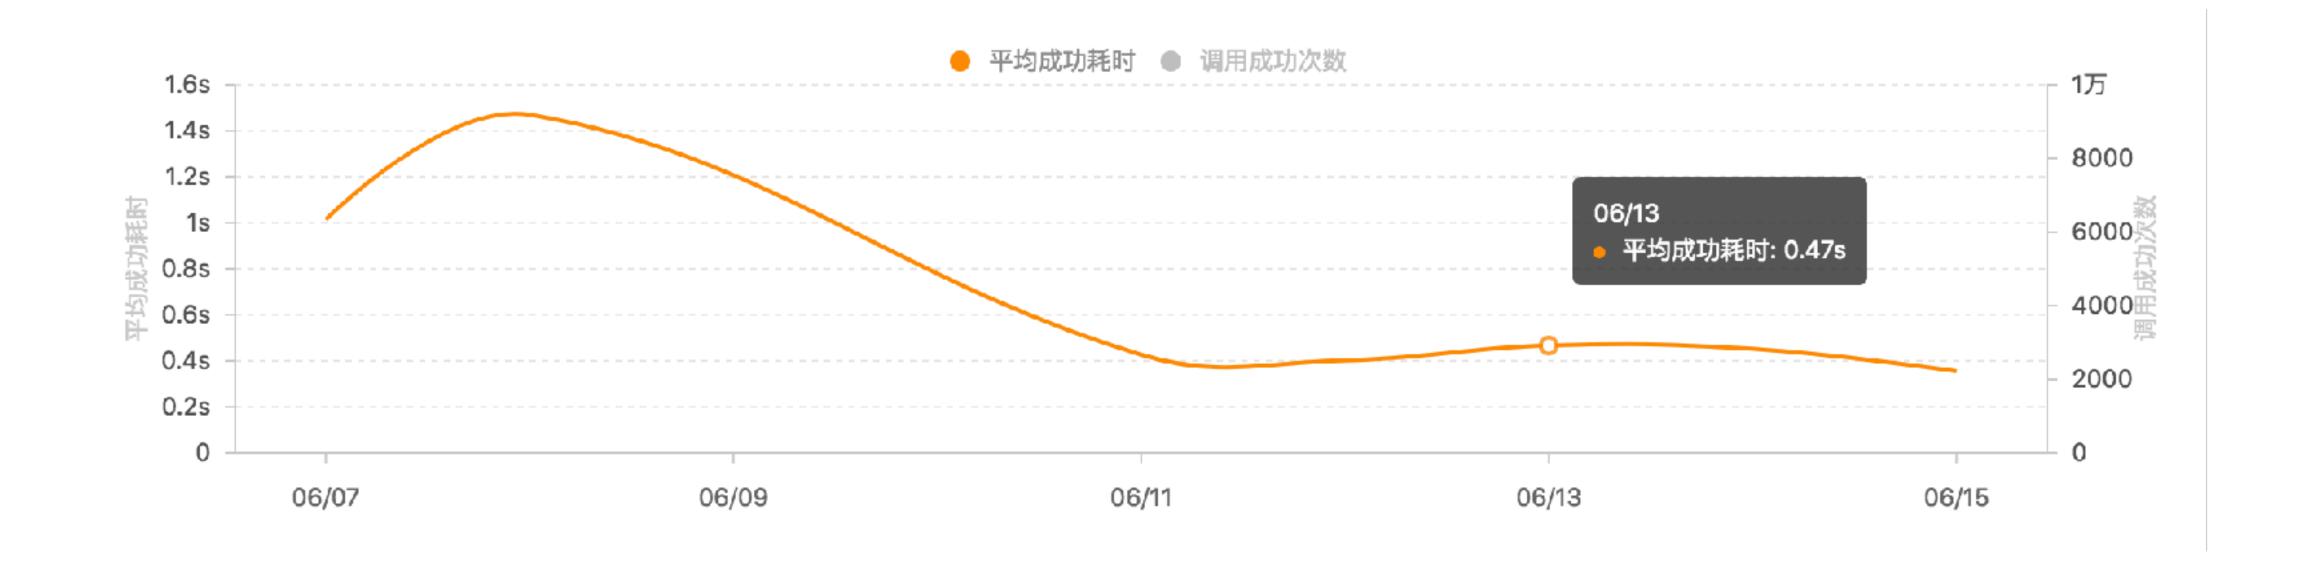

原访问链路

✓ 通过将bundle.js,模块代码,rax组件代码推动端内缓存,做的只有数据请求

优化后的效果

增加监控,为业务保驾护航
